

IN THE SPECIFICATION

Replace the paragraph beginning on line 25, of page 5 with the following

- -Yet another object of the present invention is to provide ~~plant~~ plant transformation vector using the so called 'bidirectional expression module' expressing selection marker gene like nptII (kanamycin resistance) or hptII (hygromycin resistance) or one useful gene in one direction and a reporter gene like GUS A, GFP or any other useful protein coding gene in other direction.- -

Replace the paragraph beginning on line 3, of page 9 with the following

- -In a preferred embodiment, ~~to~~ the present invention relates to a bidirectional promoter comprising:- -

Replace the paragraph beginning on line 31, of page 9 through line 2, page 10 with the following

- -These so called *cis*-regulatory conserved sequence elements were strategically arranged on the ~~bases~~ basis of their percentage occurrence, there copy number and there most common position of occurrence in the dataset of highly expressed plant genes to ~~from~~ form a completely novel Transcription Activation Module (SEQ ID NO. 1). The TAM is 312 bp long sequence whose critical function is activation or enhancement of transcription.- -
